■ Manager commentary

We took the decision to adjust asset allocation in the Portfolio during March, taking profits from our equity positions whilst also reducing interest rate risk within our government bond holdings.

Having benefited from our decision to increase equity exposure following the sharp falls in the last quarter of 2018, we felt it appropriate to now reduce those holdings somewhat given stock markets and valuations have recovered materially. Our outlook for equity markets remains constructive but we believe a degree of consolidation is likely, so moderating our exposure now provides room to use any periods of weakness as an opportunity to accumulate risk assets again on lower valuations.

Somewhat unusually, the rally in risk assets has coincided with a significant rally in government bond markets as interest rate expectations have tumbled on the back of very dovish messaging from the US Federal Reserve (Fed). This has benefited Portfolio performance as we gradually accumulated Treasury bond holdings over the last two years (as interest rate expectations fall the value of fixed rate bonds rises). This rapid about-turn in market pricing makes some sense given Fed guidance, but in our opinion may have gone too far. Although the global economy has slowed this could well turn out to be a late cycle lull and unlike the market consensus we would ascribe a greater than zero probability to the chance of another interest rate rise in the US later this year. If market expectations did adjust in that direction then there could be substantial downside in longer term Treasury bonds, therefore we reduced our holding in a Treasury bond that matures in 2043 and allocated the proceeds from both this and our equity reductions to a shorter term bond, that matures in 2020 and which is far less vulnerable to changes in interest rate expectations.
